

Solar carbon credits from commercial and industrial PV.

You built the solar. We unlock the carbon revenue.

Captive Carbon helps qualifying South African solar owners develop carbon credits from verified emissions reductions. We manage the project process and arrange credit sales, with proceeds shared under the Client Agreement.

First credits issued.

Verra issued 17,755 VCUs to the Nesa Solar PV Grouped Project, VCS 3659, on 30 September 2026. The issuance covers the monitoring period 10 November 2021 to 31 December 2024, with contributions from 17 commercial and industrial solar sites. Validated by TÜV NORD CERT and independently verified by SustainCERT. [View the record on the Verra registry](#) or [read the announcement](#).

MONITORING PERIOD

10 November 2021 to 31 December 2024

ASSURANCE

TÜV NORD CERT validation · SustainCERT verification

What we manage.

We assess the site and credit rights, prepare project documentation, coordinate monitoring and independent verification, and arrange the sale of issued credits. Your agreement sets out responsibilities, costs and revenue sharing.

When revenue is paid.

Your revenue share becomes payable after credits are sold and sale proceeds are received, under your Client Agreement. We provide a settlement statement showing the relevant volumes, sale proceeds, deductions and your share.

Our next submission

Our current intake focuses on grid-connected commercial and industrial solar sites in South Africa commissioned on or after 1 January 2025. We assess each site's eligibility, metering, generation evidence and carbon credit rights.

Our next commercial intake closes on 30 November 2026. Contact us before the deadline to confirm the assessment and documentation required for your site. Inclusion remains subject to eligibility and complete project documentation.

Next step

Send your installed capacity, commissioning date and location to jared@captivecarbon.co.za or request a revenue quote at www.captivecarbon.co.za/get-quote.
